FOR IMMEDIATE RELEASE

**Anderson Audio Adds 20 EAW KF760 Series Line Array
Loudspeakers And 16 SB1000 Subwoofers To Inventory**

Whitinsville, MA – April 18, 2007 – Anderson Audio of Harrisburg, Pennsylvania, has added 20 EAW KF760 Series line array loudspeakers to its diverse audio system inventory. The new KF760 full-range and KF761 down-fill modules are capable of providing high-impact sound reinforcement for arena and stadium applications.

In addition, Anderson Audio has further bolstered its concert sound capabilities with the addition of 16 EAW SB1000 double-18-inch subwoofers. All of these new components join EAW KF730 compact line array loudspeakers as well as EAW JF80 compact loudspeakers and EAW SM200 stage monitors that were already in the company's inventory.

Anderson Audio has long specialized in providing a wide range of production services for corporate and theatrical clients as well as high-profile special events, and the new EAW inventory now positions them to fully serve the needs of concert sound reinforcement as well. In fact, the new line array system and subwoofers have already been utilized for a just-completed Midwestern U.S. tour swing by popular country artist Vince Gill.

"The KF760 line arrays and SB1000 subs, as well as the supporting electronic products we added concurrently, are ideal for the concert portion of the market while also providing more flexibility to our entire customer base," explains Chris Anderson, president and founder of the company.

"Everyone who gets in front of this new system has offered rave reviews," he adds. "The sound quality is unmistakably EAW, and one engineer in particular was amazed that so little needs be done with the rig to attain a superior concert signature."
