FOR IMMEDIATE RELEASE

**Event Productions USA Expands With EAW KF730 Series
Line Arrays and UX8800 Digital Processors**

Whitinsville, MA – February 21, 2008 – Charlotte, North Carolina-based production company Event Productions USA recently added EAW KF730 line array modules, EAW UX8800 digital signal processors, and EAW SB1000z subwoofers to its growing audio system inventory.

Founded and owned by Tom Durban, Event Productions USA has specialized in serving the production needs of the corporate AV marketplace, nationwide, for 15 years. Providing video and lighting systems with expert staff services has been the company's primary focus until recently, when Durban responded to customer requests to also offer professional audio systems and services, with the EAW loudspeakers and processing serving as the foundation of this effort.

"We selected the EAW components based upon numerous recommendations from experienced audio professionals," Durban explains. "Our customers demand clean, highly intelligible sound quality, and from equipment meeting the stringent aesthetic requirements of all high-end corporate-industrial systems."

Event Productions USA's 16 KF730 compact three-way modules and eight SB1000z dual-18-inch-loaded subwoofers present additional value due to their scalability, with premium performance and coverage often able to be attained with fewer components. As a result, the loudspeaker inventory can be divided into two fully functional systems capable of serving multiple events. Further, the new audio inventory serves as a lynchpin for the company to expand into other AV markets.

The two UX8800 dual-mode digital processors further optimize the performance of the KF730 line arrays, providing overall system processing in addition to specially customized Gunness Focusing alignment and driver processing algorithms that deliver the sonic quality of premium studio monitors from larger, horn-loaded systems. The processors are split between two very clean, low-profile portable equipment racks that also house new QSC Power Light 3 Series power amplifiers.
