

KF SERIES

3-WAY FULL-RANGE PASSIVE & POWERED LOUDSPEAKERS

Designed for an extremely wide range of applications, the new KF Series offerings deliver a scalable solution for corporate A/V events, small-to-medium-sized live sound reinforcement, performing arts venues, houses-of-worship, retail spaces, ballrooms, theaters, theme parks and more.

The new KF and KF_{NT} loudspeakers make up a series of ultra-compact, three-way loudspeakers that deliver premium performance in designs that offer a lightweight solution. The complete range includes two externally powered models (90 × 45 and 60 × 45) and three comprehensively integrated models (NT** versions of the two previously described, and a 10-inch / 8-inch coaxial model). At the heart of the new KF Series product line is a core cabinet philosophy that allows users to utilize universal hardware accessories to tailor their KF product to meet the specific needs of their application.

The new KF Series models include the KF364 and KF394, packing even more capability and application flexibility into the ultra-compact series of premium 3-way loudspeakers. The integration of premium neodymium components, a co-axial mid/high frequency component and world-renowned crossover design into an adaptable enclosure offers unprecedented utility. When used in conjunction with EAW's UX8800 Processor and its proprietary EAW Focusing, the KF Series provides the pinnacle of performance in any venue.

The new comprehensively-integrated KF_{NT} models include the KF200_{NT}, KF364_{NT} and KF394_{NT}. Like the non-NT versions, these units feature outstanding capability and versatility in a compact housing. Aside from class-leading neodymium components and co-axial mid/high frequency components, they feature EAW Focusing processing, software-accessible DSP and the proprietary U-Net network.

A variety of available accessories offer the ability to tailor each of the new KF and KF_{NT} products to any application. All new KF and KF_{NT} models natively offer both portable features and M10 installation points. For contractors and system integrators who require added flexibility, available universal accessories include trim plates that hide handles, adjustable U-brackets, quick release flytrack segments that integrate into any enclosure and adjustable legs for use as a stage monitor.

Designed for an extremely wide range of applications, the new KF Series offerings deliver a scalable solution for corporate A/V events, small-to-medium-sized live sound reinforcement, performing arts venues, houses of worship, retail spaces, ballrooms, theaters, theme parks and more.

** The NT Series are not conventional P.A. loudspeakers. They incorporate a revolutionary active DSP (digital signal processing) technology known as EAW Focusing. In basic terms, EAW Focusing corrects the sonic problems inherent in conventional compression driver phase plugs, horns and LF driver technology. This, along with the highest quality internal amplification, affords sonic performance comparable to premium direct radiating studio monitors, but at much higher output levels. The NT's integral electronics are based on proven, high efficiency amplifier technology, and feature field-replaceable amplifier modules for added convenience and minimal down time should an extremely rare amplifier failure occur.

KF Comprehensive mechanical feature set:

- *Premium Performance*
- *Application Flexibility*
- *Neodymium Components*
- *NT Upgrade Capability (KF364, KF394)*

KF_{NT} Comprehensive mechanical feature set:

- *Comprehensive Integration*
- *EAW Focusing*
- *U-Net (Audio and Communications Network)*
- *EAW Pilot Control and Communications*
- *1500 Watts of class-leading power*
